

Test Plan

Date: May 21, 2026

Product: Ryan's Login & Signup System

Prepared By: Akash Roy

Approved By: N/A

1. Introduction

Objectives

The objective of this testing process is to validate all major functionalities of the Ryans Login and Signup system.

Testing will ensure:

- Proper validation of user inputs
- Functional accuracy of login and signup workflows
- Security and access control
- Proper validation messages
- System stability
- Responsive UI behavior
- Compatibility across browsers and operating systems

Modules Under Test

Login Module

- Login with Mobile
- Login with Email
- Forgot Password
- Password Visibility Toggle
- Session Management
- Error Validation

Signup Module

- Register with Mobile
- Country Selection
- Mobile Number Validation
- Password Validation
- Captcha Validation
- Captcha Refresh
- Form Reset
- Login Redirect

2. Team Members

Resource Name	Role	Type
Akash Roy	Jr. SQA Engineer	Full-time

3. Test Scope

Testing will be conducted based on:

- Functional Requirements
- UI/UX Design
- Security Standards
- User Workflows

The following testing types will be performed:

- Manual Functional Testing

- System Testing
- Regression Testing
- UI/UX Testing
- Security Validation Testing
- Cross-browser Testing
- Responsive Testing

Black-box testing methodology will be used for system testing.

Manual testing will be implemented for all workflow and validation testing.

4. Test Approach

System Testing

Black-box testing methodology will validate all login and signup functionalities manually.

Manual Functional Testing

QA testers will manually validate:

Login Module

- Valid login
- Invalid login
- Empty field validation
- Wrong password validation
- Password masking
- Password visibility toggle
- Forgot password functionality
- Session timeout

- Reset button functionality
- Cancel button functionality

Signup Module

- Successful registration
- Invalid mobile number validation
- Duplicate number validation
- Country code validation
- Password strength validation
- Captcha validation
- Captcha refresh functionality
- Empty field validation
- Reset button functionality
- Login redirect link

Security Validation Testing

Basic manual security testing will be performed for:

- SQL Injection
- XSS vulnerabilities
- Invalid input handling
- Unauthorized access attempts

Example test inputs:

' OR 1=1 --

<script>alert('Hacked')</script>

UI/UX Testing

Testing will verify:

- Alignment consistency
- Button visibility
- Field spacing
- Proper placeholder text
- Responsive design
- Validation message visibility
- Country code formatting

Example:

- +880 expected format
- 880 may be logged as a minor UI issue

Cross-browser Testing

Testing will be performed on:

- Google Chrome
- Mozilla Firefox
- Microsoft Edge
- Safari

To ensure:

- Consistent UI
- Proper functionality
- No layout breaking

5. Test Environment

Operating Systems

- Windows 10/11
- Android
- iOS

Browsers

- Google Chrome
- Mozilla Firefox
- Microsoft Edge
- Safari

Testing Tools

- Browser Developer Tools
- Postman (optional)
- Screenshot Tool
- MS Excel / Google Sheets
- Bug Tracking Tool

Testing URLs

1. [Ryans Login Page](#)
2. [Ryans Signup Page](#)

6. Software Required

The following software and tools are required:

- Google Chrome
- Mozilla Firefox

- Microsoft Edge
- Safari Browser
- Internet Connection
- MS Word / Excel
- Screenshot Tool
- Postman (optional)

7. Features to be Tested

Login Functionality

- Login with valid mobile number
- Login with invalid mobile number
- Login with email
- Invalid password handling
- Empty field validation
- Password masking
- Password visibility toggle
- Forgot password
- Session management
- Reset button
- Cancel button

Signup Functionality

- Registration with valid information
- Invalid number validation
- Duplicate number validation

- Password strength validation
- Country selection
- Country code validation
- Captcha validation
- Captcha refresh
- Empty field validation
- Login redirect functionality

Validation Testing

- Mobile number validation
- Password validation
- Required field validation
- Special character validation
- Length validation
- Error message validation

Security Testing

- SQL Injection validation
- XSS validation
- Unauthorized access attempts
- Invalid input handling

UI/UX Testing

- Alignment checking
- Button visibility

- Field spacing
- Responsive layout
- Placeholder validation
- Country code formatting issue validation

Cross-browser Testing

- Chrome compatibility
- Firefox compatibility
- Edge compatibility
- Safari compatibility

8. Features not to be Tested

The following functionalities are خارج the current testing scope:

- Product Ordering
- Shopping Cart
- Payment Gateway
- Product Search
- Wishlist Functionality
- Inventory Management
- Backend Database Optimization
- Mobile Application Features

9. Milestones

Test Name	Start	Finish	Effort (Day)	Comments
Test Planning	22.05.2026	23.05.2026	2	Initial planning
Requirement Review	24.05.2026	25.05.2026	2	UI and workflow review
QA Environment Setup	26.05.2026	26.05.2026	1	Browser setup
Manual Functional Testing	27.05.2026	31.05.2026	5	Login & Signup testing
Security Validation Testing	01.06.2026	02.06.2026	2	Basic vulnerability testing
Cross-browser Testing	03.06.2026	04.06.2026	2	Browser compatibility
Bug Fix Validation	05.06.2026	06.06.2026	2	Retesting
Final QA Signoff	07.06.2026	07.06.2026	1	Final approval

10. Deliverables

Deliverable	For	Date / Milestone
Test Plan	SQA Manager	23.05.2026
Test Cases	QA Team	26.05.2026
Test Execution Report	Project Manager	31.05.2026
Security Testing Report	Stakeholders	02.06.2026
Bug Report	Development Team	06.06.2026
Final QA Signoff	Management	07.06.2026

11. Risks & Mitigation

Potential Risks

- Browser compatibility issues
- Security vulnerabilities
- Validation inconsistencies
- Server downtime
- Requirement changes

Mitigation

- Continuous communication with stakeholders
- Early bug reporting
- Regular retesting
- Cross-browser validation
- Continuous monitoring

12. Exit Criteria

Testing will be considered complete when:

- All critical and major defects are resolved
- All planned test cases are executed
- Validation testing passes successfully
- Security validation is completed
- Cross-browser testing is successful
- Stakeholder approval is received
